1. Classification

Document status - Classification	OID Ref.	Version	Date
C1 (public document)	1.3.6.1.4.1.55559.1.1.1.0	1.5	2023/10/03

2. Introduction

2.1. General Presentation

NJFVision, operating as ubble, is a provider of Remote Identity Verification (RIV) Services. Our services cater to customers seeking Identity Document verification and validation of document ownership.

This document outlines the Remote Identity Verification (RIV) Policy within the certified ubble offering. It consolidates all rules, requirements, and commitments of ubble concerning the implementation, operation, and lifecycle of identity verification, both in terms of technical and organisational security requirements.

2.2. Document Identifier

The document is identified by the OID: 1.3.6.1.4.1.55559.1.1.1.0. for the identity verification service ensuring a substantial level of assurance, as defined by the [RIVSP Requirement rule set](#) by the ANSSI.

Elements specific to an OID will be indicated by placing the OID in square brackets: [OID]. Multiple OIDs may be specified, separated by semicolons. OIDs may be subject to change in case of significant changes to the VP. Upon generating a new OID, the last digit is incremented. The initial version uses the number 0.

In addition, this document is also identified by a version that may change in the event of minor modifications to the VP.

2.3. Definitions and Acronyms

Acronym	Meaning
VP	Remote Identity Verification Policy
SVP	Statement of remote identity verification practices

Term	Definition
Identity Document	official document certifying a person's identity.
Identification Data	set of personal data acquired and verified by the service in order to verify the identity of a natural person. In the context of this rule set, the Identification Data can be the video of the User's face, the video of the Identity Document presented by the User, or the User data (including the User's facial photograph) stored in the security component of the Identity Document.
Identity Attributes	subset of the Identification Data sent by the Remote Identity Verification Service to the Business Service. These attributes are: birth name, use name if present, first name(s), date of birth, place of birth, nationality and gender.
Attributes relating to the Identity Document	subset of the extracted data comprising all the fields specific to the document presented, enabling its authenticity and validity to be checked. This includes at least the issuing country, the document number and the expiry date.

2.4. Entities Involved in the Identity Verification Procedure

Remote Identity Verification Service: The purpose of a remote identity verification service is to gather and authenticate User Identification Data to establish User identities, creating an evidence file and transmitting the remote identity verification result to the Business Service.

User: An individual whose identity undergoes verification by using the RIVSP's Remote Identity Verification Service.

Business Service: The client service where the User intends to confirm their identity, under the responsibility of the client, using the Remote Identity Verification Service.

Operators: Staff members of the Remote Identity Verification Service responsible for verifying User identities.

Identity Document Fraud Officer: A member of the Remote Identity Verification Service with extensive knowledge of Identity Document security features and expertise in detecting Identity Document fraud.

Biometrics Fraud Officer: A member of the Remote Identity Verification Service with extensive knowledge of biometrics and expertise in identifying biometric fraud.

Fraud Officer: A member of the Remote Identity Verification Service who fulfills the roles of both the Identity Document Fraud Officer and the Biometrics Fraud Officer.

Team Leaders: Staff members of the Remote Identity Verification Service responsible for ensuring the application of policies and internal regulations are applied. At least one Team Leader is consistently present on the premises at all times.

2.5. 2.5. VP Management

2.5.1. Entity Managing the VP

NJFVision, operating as ubble, is responsible for the VP. Its contact information is as follows: **NJFVision, 20 bis rue Lafayette, 75009 Paris, France.**

2.5.2. Contact

For any inquiries concerning this VP, please direct them to:

- Via email: pvid@ubble.ai
- Via post: Gestion du PVID ubble, NJFVision, 20 bis rue Lafayette, 75009 Paris, France

2.5.3. Amendments to the VP

2.5.3.1. Amendment Procedure

At ubble, there exists an ubble **RIVSP Compliance Committee** responsible for overseeing that all proposed alterations to its VP adhere to the requirements set within this VP. Should a substantial change occur, the ubble **RIVSP Compliance Committee** holds the authority to engage external technical expertise, if deemed essential. Specifically:

- any change relating to Identity Documents must be formally validated by the Identity Document Fraud Officer;
- any change relating to biometrics must be formally validated by the Biometrics Fraud Officer.

2.5.3.2. Circumstances necessitating a Change in the OID

Given that the VP OID is documented in the outcomes of identity verifications, any alteration in this VP that significantly affects past identity verifications must prompt a modification in the VP OID. This action ensures Business Services can distinctly discern which verifications align with specific requirements. Particularly, the

VP OID should progress with any major alterations, notably signalled by an evolution in the OID of this VP, within the VP's requirements. For minor adjustments in the VP, solely the version of this document will be revised.

2.5.4. Entity Determining the Existence and Compliance of a SVP with this VP

ubble generates and maintains a Statement of remote identity verification practices. This statement embodies a collection of practices (including organizational structures, operational procedures, technical and human resources, etc.) utilized in delivering its service and aligning with this remote identity verification Policy. The Statement of Remote Identity Verification Practice is confidential and is exclusively disclosed to individuals on a need-to-know basis. ubble administers a ubble **RIVSP Compliance Committee**. This committee verifies the alignment of the RIVP with the VP.

2.5.5. Procedure for Approving the Compliance of the SVP

The ubble **RIVSP Compliance Committee** conducts or delegates all necessary actions (such as audits, etc.) to confirm and approve the SVP.

2.5.6. Duration and Early Termination of the VP Validity

The service's VP must remain in effect at least until the termination of the last compiled evidence file's lifecycle. This VP maintains its validity until a new version is released.

2.6. Responsibilities for Information Dissemination

2.6.1. Entities Responsible for Information Dissemination

ubble has established a publication page accessible at the following address: <https://www.ubble.ai/remote-id-verification-policy/>

2.6.2. Published Information

ubble publishes the following information:

- All VPs managed by ubble, including this one,
- A comprehensive list of accepted documents.

An area of the publication site is reserved for archiving old versions of published data.

2.6.3. Timing and Frequency of Publication

The VP is published before any identity verification with the corresponding OID. This information is accessible 24/7, every day of the week, with a maximum downtime of 4 hours. The ubble **RIVSP Compliance Committee** determines the relevant parties (customers, Users, service-providing subcontractors, regulatory entities, etc.) to be notified upon the publication of a new VP (whether an initial version or modification of an existing VP), contingent upon the nature of the changes implemented.

2.6.4. Access Control for Published Information

All the aforementioned published information is publicly available for reading purposes only. Access for modification of published data is restricted to the internal ubble teams responsible for publishing documents on the publication page.

3. Description of the Remote Identity Verification Service

3.1. Identity Verification Procedure

3.1.1. Identity Verification

The primary objective of the Remote Identity Verification Service is to authenticate the legitimacy of the User's presented Identity Document and confirm that the User is the lawful holder of the document. The determination is based on personal Identification Data, validated by the service. Following the verdict, along with the identity and credential attributes, this information is transmitted to the Business Service.

3.1.2. Identity Attributes for Uniqueness

Several Identity Attributes are distinctive to an individual's identity and are thus shared with the customer service. These attributes encompass the **birth name, any customary name (if available), first name(s), date of birth, place of birth, nationality, and gender**.

3.1.3. Description of the Identity Verification Procedure

Users requiring identity verification are prompted by the Business Service to visit the identity verification service webpage. Various methods can guide and present this page to the User. The User is then guided to capture their Identity Document and record their face through video; guidance through this process is provided in the User's native language. Following the capture of Identification Data, the verification service **asynchronously** validates it.

3.2. Languages Supported

The identity verification service supports multiple languages: **French**, German, English, Spanish, Italian, Dutch, Portuguese, Simplified Chinese, Romanian and Polish. Users are prompted to select their preferred language before the collection of any Identification Data. Additionally, Users are informed of the location (country) of the Operators responsible for verification.

3.3. Alternatives to the Remote Identity Verification

Users who are unwilling or unable to utilize the proposed identity verification service may **request an alternative method from the Business Service**.

3.4. Legal Remedies and Complaints

3.4.1. Contact

Users, Business Services and third parties can freely submit requests regarding the service (such as cancelling a fraudulent identification or refusing to identify a genuine User) via the following channels:

- Email: pvid@ubble.ai
- Postal Address: Gestion du PVID ubble, NJFVision, 20 bis rue Lafayette, 75009 Paris, France

3.4.2. Complaints Management Procedure

Requests received by post or email are logged into a tracking system to ensure traceability. Upon receipt, ubble acknowledges the requests and commits to provide a response within 7 business days.

Requests concerning the procedure of the Business Service, including the necessary steps and operations, cannot be handled by ubble. Instead, such requests will be redirected to the relevant Business Service.

Requests relating to a specific individual, processing is only possible for verified identifications. The request must contain the individual's surname(s), first name(s), date of birth, city of birth, country of birth, nationality, as well as the Business Service that requested the identification and the day it occurred.

Regarding requests related to one or more attempts (e.g., unsuccessful attempts), they can only be addressed if the request specifies the identification number provided by the Business Service.

4. Remote Identity Verification Procedure

4.1. Activities of the Remote Identity Verification Service

The Remote Identity Verification Service conducts four successive stages:

- Acquisition of Identification Data
- Verification of Identification Data
- Compilation of the evidence file
- Transmission of results

4.2. Acquisition of Identification Data

The phase of data acquisition occurs on the User's terminal via a web browser. Only mobile terminals are accepted, whether they operate on Apple iOS or Google Android systems. For compatibility, the device must be equipped with both front and rear cameras and a supported web browser.

The following web browsers are compatible:

Type of phone	Safari	Chrome	Firefox	Samsung Internet
iOS ≥11	✓			
iOS ≥13	✓	✓	✓	✓
Android		✓ ≥73	✓ ≥66	✓ ≥6.2

During the acquisition phase, the User operates independently, guided by the system suggesting alternative actions to enhance capture quality. This phase involves two stages: document capture and face capture.

For the document capture phase, the User may encounter the following requests:

- Accurately position the document title in the center of the capture zone
- Confirm that the document matches the selected category
- Ensure full visibility of the document title
- Assess the clarity, lighting, and reflections on the document
- Verify the network connection
- Adjust the document to display optically variable marks
- Position the passport photograph on specific areas or capture designated sections of the document

During the face capture phase, the User might be asked to:

- Accurately position the face within the capture zone
- Ensure full visibility of the face and, if necessary, remove any obstructing accessories
- Check focus and lighting
- Verify the network connection
- Turn the head as instructed
- Follow specific gestures or place a target on certain areas of the face during capture

No verifications conducted on the User's terminal contribute to the final "successful" outcome of remote identity verification.

4.3. Verification of Identification Data

Following capture, the Identification Data is transmitted to ubble's verification servers responsible for authenticating the document and the User's legitimacy. This data comprises videos of the Identity Document and the User's face. For usability, these videos must maintain a minimum input and post-compression resolution of 1,280 × 720 dots, providing a fluid display allowing for comprehensive analysis of security features, operating at up to 30 frames per second.

No processing, even partially, concerning the authenticity verification of the Identity Document, User face matching with the document photo, or proof of life authentication is executed on the terminal.

4.3.1. Identity Document

The authenticity of the Identity Document undergoes verification via a series of automated processes, culminating in a decision by one or more Operators, experts in identity verification. A "Fail" verdict is issued if the Identity Document is found invalid due to reasons such as: inauthentic document, reported lost or stolen, non-original document (e.g., photocopy), expired document, non-accepted document, extensively damaged document, etc. The complete list of accepted documents by the service is attached. ubble maintains a roster of Identity Document Fraud Officers responsible for analyzing each accepted document.

Only non-expired documents are eligible for the service. In cases of altered or damaged documents, the service processes the document solely if the identity and security features remain intact, contingent upon the document type.

To ascertain document validity and potential loss or theft, the service routinely checks the databases of issuing countries where available. If an Identity Document validation check deems the document invalid, the remote identity verification outcome is consistently "failed".

4.3.2. Face Comparison

The legitimacy and vitality of the holder are verified through a series of automated processes, finalized by one or more Operators, experts in identity verification. If the holder is deemed invalid, irrespective of the cause, the identity verification outcome is consistently "failed".

4.4. Creation of the Evidence File

An evidence file is generated for every identity verification, regardless of the verdict ("pass" or "fail").

4.4.1. Content of the Evidence File

The evidence file encompasses the following elements:

1. Acquisition Data:

- o Video(s) of the Identity Document
- o Video of the User's face
- o Date of acquisition

2. Verification Details on Identification Data:

- o Date of verification
- o Activity associated with each verification:
 - o Verification of the Identity Document's authenticity
 - o Detection of the User's "liveness"
 - o Comparison of the User's face
- o Nature of the verification: automatic or manual
- o Identity of the Operator or Fraud Officer conducting manually
- o Country where manual verification was conducted

- o Version and configuration (if applicable) of the tools used for automatic verification
- o Findings from automated processing or manual verification by the Operator or Fraud Officer
- 3. **Result of Remote Identity Verification** sent to the Business Service, including:
 - o Verdict of the remote identity check (successful or unsuccessful)
 - o List of external codes sent to explain the verdict
 - o Reasons provided by the Operator in the form of an internal code for "fraud fail" or "error fail" verdicts
 - o User's Identity Attributes (if available on the document: surname(s), first name(s), date of birth, place of birth, nationality, gender)
 - o Attributes related to the Identity Document presented (if available on the document: issuing country, unique Identity Document number, date of issue, expiry date, MRZ band)

The purpose of this data is to address any disputes that may arise, and under no circumstances to apply any biometric processing.

4.4.2. Conservation of the Evidence File

Upon creation, evidence files are encrypted using unique encryption keys for each file, employing the AES-256-GCM encryption algorithm. Master keys are rotated daily and stored in secure cryptographic facilities under ubble's control, accessible only in the presence of multiple administrators.

Data in the evidence file will be retained as follows unless otherwise requested by the business unit:

- Up to six (6) years for a successful verdict,
- Three (3) months for an unsuccessful verdict.

During this retention period, data in the evidence file will not undergo any processing, especially biometric processing, unless legally requested and in compliance with applicable legal requirements.

4.4.3. Access Rights to Personal Data in the Evidence File

The evidence file data, particularly personal data, is subject to the GDPR, granting Users rights with exceptions as described in the subsequent section.

4.5. Transmission of Results

Following the verification phase, the service delivers a verdict, which could result in either success or failure. In both scenarios, a result is transmitted to the Business Service.

4.5.1. Content of the Result Transmitted to the Business Service

The result comprises:

- The **verdict** (success, error, failure, or fraud failure)
- A **list of external codes** forwarded to the Business Service to explain the verdict
- **Identity Attributes** related to the User (If present on the document: surname(s), first name(s), date of birth, place of birth, nationality, gender)
- **Attributes related to the presented Identity Document** (If available on the document: issuing country, Identity Document number, date of issue, expiry date, MRZ band)
- **Additional data** considered necessary by the sponsor
 - One or two photo(s) of the Identity Document (front and back), captured in the video stream; a photo of the User's face, captured in the video stream
 - Data sent by the sponsor's customer service department: declared identity, email address, phone number, unique identifier of the Business Service User

- The result of a comparison of the declared data with the extracted data

Please note:

- Additional data does not in any way contribute to the formulation of the verdict
- The following elements are not part of the result transmitted to the Business Service:
 - Videos of the document and the face are in no way, wholly or partially, transmitted to the Business Service
 - No elements relating to the verifications conducted by the service other than the verdict and the list of external codes are transmitted to the Business Service.

4.5.2. Timing of Result Transmission to the Business Service

The duration between the commencement of User Identification Data acquisition and the notification of the identity verification result to the Business Service typically spans a few hours and does not exceed 96 hours.

5. Procedure for Detecting Identity Theft Attempts

5.1. Detection of Suspected or Confirmed Identity Theft Cases

The primary objective of ubble's Remote Identity Verification Service is to mitigate or prevent instances of identity theft. To accomplish this goal, indicators of potential identity theft cases are measured and scrutinized during the identity data verification phase. Among these indicators, the following events trigger suspicion of identity theft:

- Use of a counterfeit Identity Document
- Alteration of identity data on an authentic Identity Document
- Use of a declared stolen or lost Identity Document
- Modification of the photograph on an Identity Document
- Evident alteration of a User's appearance to resemble the owner of an Identity Document
- Verification conducted under coercion or without the User's knowledge
- User registering under the belief of signing up for another service

5.2. Alert of Suspected or Confirmed Identity Theft

For each suspected or confirmed case of identity theft, whether detected by ubble or communicated by the Business Service, an alert is generated. Each alert undergoes analysis, aiding in the prevention of fraud and the enhancement of the system.

6. Personal Data Management

6.1. Status

ubble processes Users' personal data as a data processor on behalf of the Client whom the User is engaging with and who has contracted with ubble to provide the identity verification service. The Client is accountable for processing the Users' personal data.

As a data processor, ubble adheres to the principle of data minimization, collecting and retaining data in accordance with the Client's instructions.

6.2. Personal Data Processed

Personal data related to Users processed by the Remote Identity Verification Service includes:

Categories of personal data	Details
Connection Data	<ul style="list-style-type: none"> • Connection type (3G, 4G, Wi-Fi, etc.) • Operating system version • Browser type • Timestamp • IP address • Device type (smartphone, tablet, computer) • Email address • Phone number • Unique identifier of the Business Service User
Civil Status Data	<p>Filming the official Identity Document generates numerous high-quality images. Extracted data from these images include:</p> <ul style="list-style-type: none"> • Document type • Nationality • Document registration number • Birth name • Usual name • First name(s) • Gender • Place of birth • Signature • Expiry date • Issuance date • User's face photograph
Face Videos	Filming the User's face generates hundreds of images of the User's face.
Biometric Data	ubble computes a facial imprint of the User from the Identity Document and face videos to compare the imprints for this User.
Metadata regarding the Verification Process	<p>Necessary for the evidence file:</p> <ul style="list-style-type: none"> • Date of User Identification Data acquisition • Operator ID who verified the Identification Data • Country from which the Operator conducted the verification • Date of Identification Data verification • Details of all verifications performed on the Identification Data • Result of the transmitted remote identity verification to the Client

6.3. Purposes and Processing Operations

ubble processes Users' personal data on behalf of the Client, solely for the following purposes:

- To verify the Users' identity within the scope of fulfilling a contract between ubble and its Client;
- To compile an evidence file containing all the necessary information for dispute resolution;
- To audit the service quality and notify ubble's Client of any failures during the verification of a User's identity.

These processes involve the collection, encryption, consultation, utilization, archiving, and deletion of Users' personal data.

6.4. Retention Periods

As a standard practice, and unless instructed otherwise by the Client:

- Each User's data, including their biometric data, is processed in an active database for the duration necessary to verify the User's identity.
- Biometric data will be securely and permanently deleted no later than 96 hours following its collection.
- Other personal User data will be archived for up to three (3) months for the purpose of auditing service quality.
- The evidence file is stored in intermediate archiving in the event of a dispute, starting from the transmission of the verification result to the Client:
 - o Up to a maximum of six (6) years in the case of a successful verdict.
 - o For three (3) months in the case of a failed verdict.

The archived personal data is accessible only to specifically authorized individuals with a legitimate need-to-know due to their roles and for the strictly defined purposes mentioned above.

After the specified archiving periods, the personal data undergoes secure and permanent destruction, except in the case of an ongoing dispute or legal procedure requiring data retention for the entire duration of the proceedings.

6.5. Subprocessing

The subprocessors involved in the processing of Users' personal data are:

- Outscale SAS, registered under number 527 594 493 RCS Nanterre, to provide the identity verification hosting service. The data transmitted to Outscale SAS is encrypted.
- Sendinblue, registered under number 498 019 298 RCS Paris, to provide the SMS redirection service (only phone numbers are communicated).

6.6. Users' Rights

Barring exceptions, the Service allows Users to exercise their rights to access, rectify, and erase their data in accordance with the Client's privacy policy. Exceptions to the Users' rights are as follows:

- Rectification or deletion of the evidence file and the results of the transmitted remote identity verification to the Business Service, along with all information necessary for result compilation.
- Access to data subjected to automated or manual processing, the disclosure of which could provide insight into the nature of the verifications conducted by the service and related to identity theft detection.

Users must contact the Client, the data controller, to exercise their rights.

6.7. Alternative Method

If the User does not wish to undergo identity verification through the Service described in this document, they should contact the Client's Business Service to obtain an alternative method for verifying their identity.

6.8. Research and Development

ubble, as data controller, processes Users' personal data for the purpose of research and continuous improvement of the Service, based on its legitimate interest, for a maximum duration of 3 months from its collection. These processes, aimed at effectively enhancing service reliability, require assessing potential enhancements against the substantial variability presented by real Users' conditions, thereby necessitating the use of Users' data. Only authorized ubble employees have access to Users' data.

Users have the right to access, rectify, and delete their personal data, limit its processing, and object to its processing for R&D purposes by ubble. To exercise their rights, Users can contact ubble's Data Protection Officer (DPO):

- Email: privacy@ubble.ai
- Postal address: DPO ubble, NJF Vision, 20 bis rue Lafayette, 75009, Paris, France

Users also have the right to lodge a complaint with any competent authority. In France, this is the CNIL (<https://www.cnil.fr/>).

7. Intellectual Property Rights

All intellectual property rights owned by ubble are protected by relevant legislation and regulations. Users have no intellectual property rights other than the right to access the Service regarding the various elements implemented by ubble to ensure its identity verification service. Infringement upon trademarks, trade names, designs, copyrights (e.g., software, web pages, databases, original texts, etc.) is punishable under the Intellectual Property Code.

8. List of Documents Accepted by the Service

8.1. Rules for Accepting Documents

Only regular Identity Documents (excluding diplomatic, service, and temporary documents) are accepted within the framework of this guideline, provided they exhibit features meeting the requirements defined in this policy and align with the following criteria:

1. For French citizens, nationals of other European Union member states, a state party to the agreement on the European Economic Area, or Switzerland, the passport or national identity card, provided the document is equipped with a [MRZ band](#) and adequate security features (such as [optically variable features](#)), in line with Regulation (EU) No 2019/1157 of the European Parliament and the Council of 20 June 2019.
2. For third-country nationals residing in France or another EU member state, a state party to the agreement on the European Economic Area, or Switzerland, the residence permit issued according to the model provided by Regulation (EU) No 2017/1954 of the European Parliament and the Council of 25 October 2017, or by Regulation (EC) No 1030/2002 of the Council of 13 June 2002, issued by the country of residence.
3. For third-country nationals [exempt from the obligation of a short-stay visa to enter mainland France](#), not residing in the territory of the European Union, a state party to the agreement on the European Economic Area, or Switzerland, the **electronic passport**, except for countries where the visa exemption requires a biometric passport, for which no document will be accepted.
4. For third-country nationals recognized as refugees or stateless persons or beneficiaries of the protection provided by Directive 2011/95/EU of the European Parliament and of the Council of 13 December 2011, and the content of this protection, the passport is replaced by the **travel document issued by the State that has recognized refugee or stateless status or granted protection**.
